

IC Consulting
The future of Domino

IC Consulting

The future of Domino

IC Consulting is the partner of choice for strategically evolving your IT systems rather than drifting from one technology to the next. Merely reacting to technology developments fails to take full advantage of proven legacy systems or promising new technologies.

After Domino

Don't replace Domino – reuse it.

Many organisations have made significant investments in Domino over the past decade. It is expensive and time consuming to determine who is using these applications, let alone even begin the process of rewriting them.

Divesting your organisation of the knowledge and reliability in Domino applications that has been honed over a period of five to 15 years does not make sense. IC Consulting makes it possible to leverage these corporate assets to ensure their continued contribution.

With a proven track record in helping customers continue to leverage existing Domino assets while taking advantage of emerging technologies, we are your partner of choice for taking **Domino into the future**. Due to a sharp focus and industry-leading expertise, IC

Consulting is the most qualified in NSW to successfully extend an organisation's Domino investments.

In with the old, in with the new

The emergence of sophisticated middleware technologies enables the organisation with a strategic focus to extract the most benefit from legacy applications and the latest innovations.

The business benefits of continuing to **leverage Domino** include:

- extending the lifecycle of legacy applications
- extending the reach of current technology investments to the entire organisation with mobile devices, and
- enhancing legacy applications with new technologies, such as J2EE, portal and web services.

Synergies begin to emerge when the two are combined in innovative ways. Not only can Domino be reused, it can be repurposed. With advanced middleware technology, its reach can easily be extended to devices such as PDAs and mobile phones.

Furthermore, the information and business process assets contained in Domino can be combined with new applications to enhance functionality. In fact, Forrester research advises that in creating a **service oriented architecture**, the best place to start is by working with the current infrastructure*.

For example, Domino may hold an extensive sales catalogue with pricing information. A J2EE application could create automatic quotes for users on the web that pulls product data from the Domino database, uses a web service to convert the price into the currency specified by the user, renders a PDF

document, and then emails it to the user. Product information can continue to be stored and maintained in Domino, but the information can now be used in new and innovative ways.

Your partner of choice

We are IBM WebSphere Portal specialists and invest heavily in staff training, which makes partnering with us a safe investment. All our people are certified Domino or Portal professionals.

We can help you:

- bring **best practice** to the organisation, ensuring reliability and functionality
- ensure adherence to timelines and budgets through solid project management experience
- implement the latest **service oriented** technologies with proven experience in integrating legacy applications, and
- deliver stakeholder satisfaction by ensuring scalability and performance.

We have the expertise to:

- assess the characteristics of Domino applications relevant to integration, ensuring a seamless integration
- apply appropriate integration techniques according to the business need
- use best practice Domino **portlet patterns** to ensure stability and performance, and

- consider application complexity, type and usage patterns, delivering the appropriate level of technology for the task.

Make the most of Domino by working with IC Consulting.

About IC Consulting

At IC Consulting, we focus on delivering business value through the innovative use of technology.

Offering a broad range of expertise and services, including consulting, reporting, application development and assistance with eBusiness strategies, we use a variety of leading edge tools and methods to ensure results.

We pursue a policy of employing young, smart graduates and rewarding them for continuing **education and certification**, challenging them to be their best. We invest in developing the individual so our team can in turn help you grow and develop your business.

You can also **choose how you work with us**. We offer two engagement models:

- an **outsourcing model** where we take ownership of the project in a traditional client-consultant relationship, and
- a **collaborative partnership** model where we join forces with your IT department to transfer skills and knowledge, enabling them to deliver the project internally.

Both models deliver business value through the clever use of technology, but you decide the engagement model to suit your circumstances.

Since 1998 IC Consulting has focused on assisting Australian companies to improve their business. Our areas of expertise cover:

- WebSphere Portal
- Workplace Forms
- business integration and workflow
- Domino reuse and repurposing, and
- consulting services.
